### Alzheimer Disease: The Changing View eBook: Katzman ...

Both normal aging and Alzheimer's disease (AD) are associated with changes in cognition. Obviously, these changes are more pronounced in AD and proceed faster providing the basis for an AD diagnosis. Nevertheless, age-related cognitive changes can also be observed in healthy individuals . These changes do not involve all cognitive domains but particularly relate to executive and attentional functions.

### Disassociating Normal Aging from Alzheimer's Disease: A View ...

Alzheimer's is not a part of normal aging, but as you grow older the likelihood of developing Alzheimer's disease increases. One study, for example, found that annually there were two new diagnoses per 1,000 people ages 65 to 74, 11 new diagnoses per 1,000 people ages 75 to 84, and 37 new diagnoses per 1,000 people age 85 and older.
