Over time the wave-cut notch will develop into a cave. Eventually, the weight of the unsupported cliff will cause it to collapse. As the cliff collapses a layer of flat rock is left behind called a wave cut platform. The platform typically has a slope of less than 4 degrees, which is often only fully exposed at low tide.

A-Level Geography Revision - StudyWise

The DTM is a model of population change from a low stable population to a high stable population as a result of a preliminary fall in the death rate from a high level (45/1000 p.a. to around 9/1000 p.a.) to be followed later by a fall in the birth rate. The time-lag between the decline in the two measures of natural population change results in a period when there are far fewer people dying ...
