FUNCTIONS. In the following discussion and solutions the derivative of a function $h(x)$ will be denoted by $h'(x)$. The following problems require the use of these six basic trigonometry derivatives : These rules follow from the limit definition of derivative, special limits, trigonometry identities, or the quotient rule.

Trigonometric Functions

The six trigonometric functions also have differentiation formulas that can be used in application problems of the derivative. The rules are summarized as follows: 1. If $f(x) = \sin x$, then $f'(x) = \cos x$. 2. If $f(x) = \cos x$, then $f'(x) = -\sin x$. 3. If $f(x) = \tan x$, then $f'(x) = \sec^2 x$. 4. If $f(x) = \cot x$, then $f'(x) =$

respect to a variable. For example, the derivative of the sine function is written $\sin' = \cos$, meaning that the rate of change of \sin at a particular angle $x = a$ is given by the cosine of that angle. All derivatives of circular trigonometric functions can be found from those of \sin and \cos by means of the quotient rule applied to ...
