The second mixed raw moment, which is $E[N(t)N(s)]$, is called the auto-correlation function of the stochastic process. And the acf for Poisson process with parameter λ is $E[N(t)N(s)] = \lambda st + \lambda \min\{s, t\}$, $\quad s, t \geq 0$

An introduction to stochastic processes, which are random processes occurring in time or space. They are used to model dynamic relationships involving random events in a wide variety of disciplines including the natural and social sciences, and in financial, managerial and actuarial settings.

stochastic processes. Chapter 4 deals with filtrations, the mathematical notion of information progression in time, and with the associated collection of stochastic processes called martingales. We treat both discrete and continuous time settings, emphasizing the importance of right-continuity of the sample path and filtration in the latter ...
